

ManyContacts

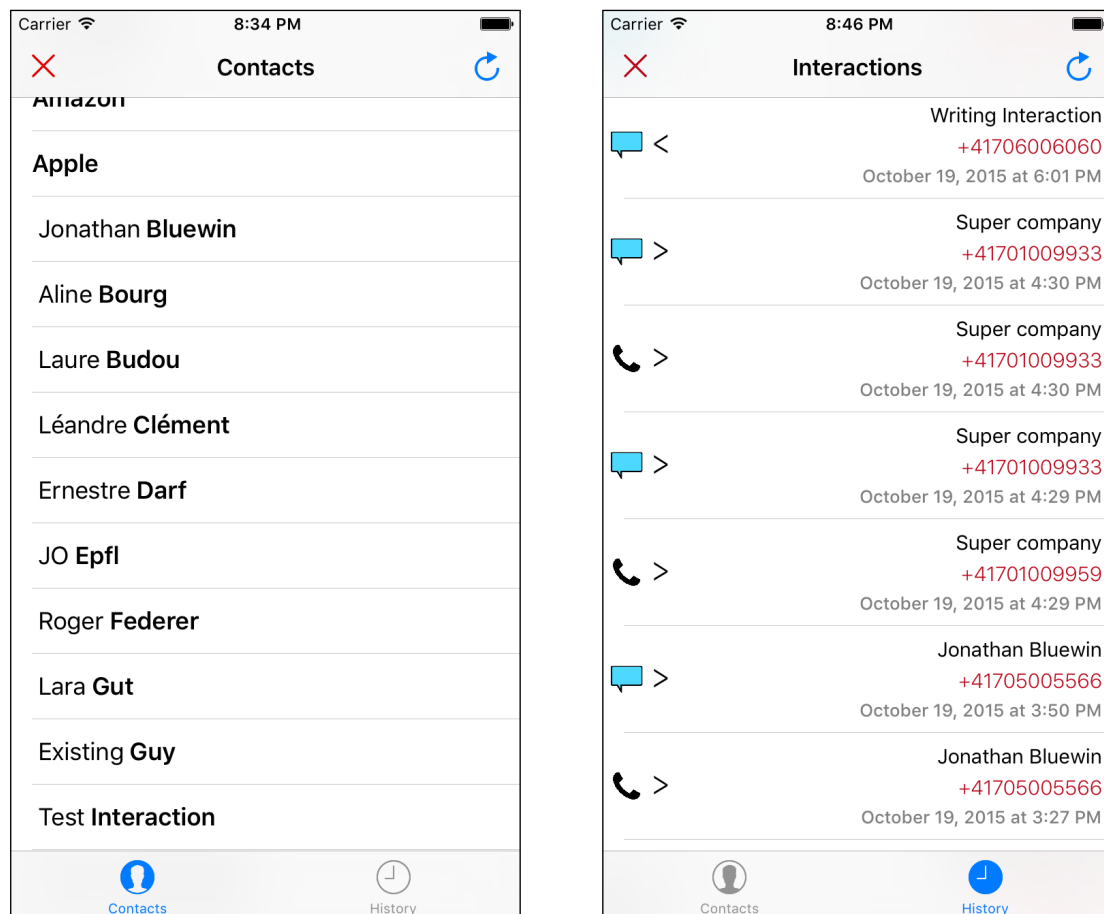

Login screen

The login screen is very basic. It only requires to enter the credentials one time.

The application keeps the authentication token in memory until it expires or until the user logs out.

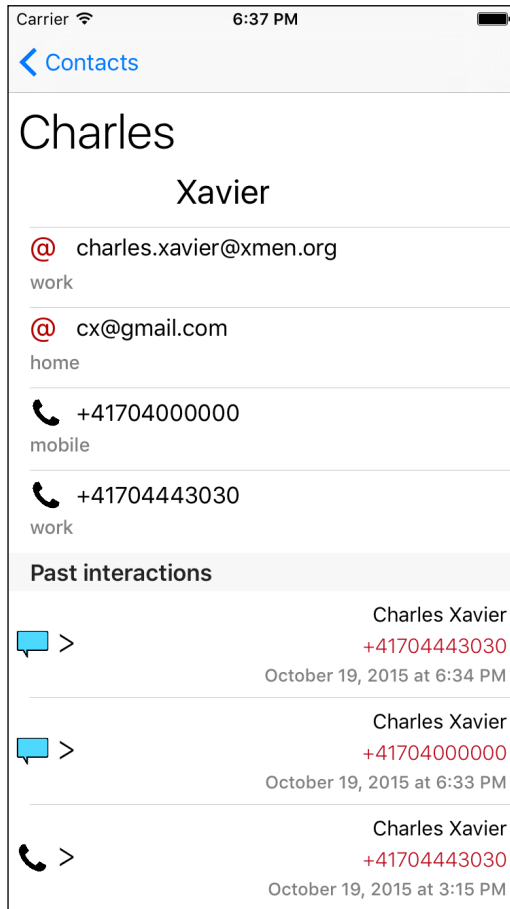

Main Screen - Contacts and Interactions

The main screen has two tabs. The first one displays the contacts and the second one displays all the interactions. These interactions show when, with who and how the it happened. The signs ">" and "<" stand respectively for outgoing and incoming communication.

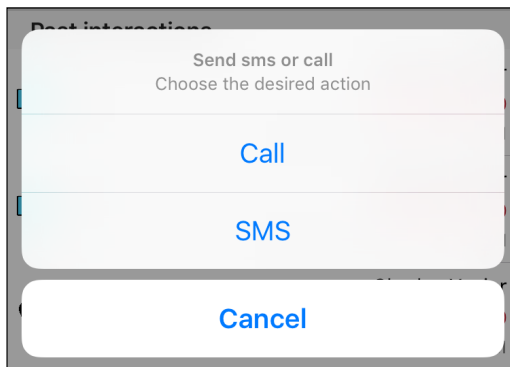

The top bar contains buttons to logout and to refresh the list.

Detailed contact information

When the user selects a contact in the previous view, it will show here more details about it.

The user can call by clicking on a phone number.

In the case of a mobile phone number, he has 2 options.

Technical

The project is using two external libraries that are under the MIT license:

- JGProgressHUD: provides an easy way to add beautiful progress huds.
- JNKeychain: provides a fast way to store information in the iOS keychain.

Note: The application only works when Internet connection is available.
